^a Cytotoxicity indicates the highest dilution of the endpoint titer where full (80-100%) cytotoxicity was observed
^b Neutralization control indicates the highest dilution of the endpoint titer where compound inhibited virus CPE in wells after neutralization (ignored for calculation of virus titer and LRV)
^c Virus titer of test sample or virus control (VC) in log₁₀ CCID₅₀ of virus per 0.1 mL
^d LRV (log reduction value) is the reduction of virus in test sample compared to the virus control

Our EscenciaProtect™ was effective against COVID19. The data shows the virus was below detected level after use of our plant-based sanitizer.
